Energy Efficient Infrared Heat

DX-100

Options

- ◆ 240 volt
- ◆ Legs
- ◆ Wheels
- ◆ Assembly

DX-100 is a table top, entry level conveyor dryer which is perfect for a home-based business looking to increase production up to 110 shirts per hour. This unit cures plastisol and plastisol discharge screen printed inks.

The DX-100 incorporates a 4 foot conveyor with an 18 inch wide Teflon coated, fiberglass belt. This model includes a variable speed control for the belt. Belt tracking is accomplished with tension adjusters using 2 simple bolts. An insulated 16 x 16 inch 1600 watt heater panel has an analog, adjustable temperature control for even heating (no hot and cold spots with our quality heating panels). The heater can be adjusted from 3 to 7 inches and can be angled to cure caps. The dryer operates on 120 volts and requires 20 amp service with a Nema 5-20p plug (provided).

Minimal assembly required.

DX Series Model	DX-100	DX-200	DX-300
Voltage (VAC)	120 / 240	120 / 240	120 / 240
Wattage (W)	1600	1600	2314/3200
Amp	14 / 7	14 / 7	20 / 10
Belt Width (in)	18"	18"	18"
Conveyor Length (ft)	4'	5'	5'
Belt Speed (ft/min)	0-35	0-35	0-35
Tunnel Length (in)	18	24	24
Heat Panel Size (in)	16" x 16"	16" x 16"	18" x 20"
Product per Hour (Plastisol Ink)	110	120	125

SCAMP SERIES

DX-200

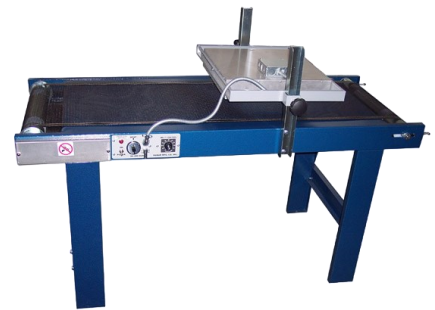

DX-200 is a floor model with ample space for loading shirts onto the 5 ft conveyor. This model offers an 18 inch wide Teflon-coated fiberglass belt and a solid state speed controller. The 16 x 16 inch, 1,600 watt heat panel comes with height adjustments from 1 to 4.5 inches off the belt (w/oven hood) and can be tilted to 90 degrees from the belt (w/oven hood off) to cure caps. The DX-200 dryer operates on 120 volts requiring 20 amp service and a NEMA 5-20p plug (provided). A 240 volt option is available. This dryer ships 98% assembled (the legs to be installed).

DX-300

DX-300 conveyor dryer is a floor model that offers all of the same features of the DX-200 dryer with an 18 x 20 inch heat panel that runs on 120 volts. The 18 x 20 inch heat panel has 2,314 watts of heat and makes use of a solid state controller to adjust the temperature.

*Customers can choose to increase power to 240 volts with 3,200 watts of heat.
